

VivaRoots!

Premium Endomycorrhizae Mix

VivaRoots! Endomycorrhizal powder (water soluble) inoculum consists of a blend of the 4 essential endomycorrhizal fungi species which colonize plant roots, expand into the surrounding soil and greatly increase the root's ability to absorb water and nutrients, while

improving plant yields and health. VivaRoots! is uncut and undiluted with 220+ spores per gram!

Compared to more expensive products, VivaRoots! offers the same or better performance at a fraction of the price.

More than 90% of the world's plant species form symbiotic relationships with beneficial endomycorrhizal fungi!

VivaRoots! can help your plants!

- Reduces drought stress, transplant shock, water and fertilizer needs
- Increases flowering & fruiting, root growth, water storage and nutrient uptake
- Promotes extensive root structure, soil structure, and plant establishment
